Desiring an opportunity as a Front End Web Developer using proficiency in **JavaScript**, **React**, **NextJS**, **Angular** framework along with other technologies such as **Redux**, **RxJs**, **TypeScript.**

⚒ PROFESSIONAL **SKILLS**

JavaScript, React, Next JS, Angular, Redux, RxJS, Astro Typescript, Tailwind, Shadcn, Material UI,

Familiar with : Git & Github, Docker, NodeJS, Express JS, MongoDB, Firebase, Figma UI, Framer Motion GSAP, WebRTC

⚒ WORK **EXPERIENCE**

☐ **Coppanet ltd :** Sr. Front-end Developer   _May 2022 - Present_

- Led the successful contribution to the main project, a doctor appointment application, by conducting research, creating comprehensive documentation, and crafting user flows.

- Designed the frontend of the application, ensuring a user-friendly and intuitive interface, while effectively integrating APIs to enhance functionality.

- Collaborated closely with cross-functional teams, including designers and backend developers, to achieve seamless integration and optimal user experiences.

- Utilized strong problem-solving skills to troubleshoot issues, implement enhancements, and ensure the application's smooth operation.

- Demonstrated a strong grasp of project management principles, meeting deadlines and milestones while maintaining a high standard of quality.

☐ **Intwins :** Front-end Developer   _May 2021_

- **Architected and led the development of enterprise-grade** front-end solutions, leveraging frameworks like React, Next.js, and Angular to build scalable, high-performance applications with a strong focus on accessibility and cross-browser compatibility.

- **Engineered reusable**, modular UI components and implemented robust design systems, streamlining development workflows across teams and ensuring brand consistency across multiple products and platforms.

- **Optimized front-end architecture** for performance and SEO, while integrating RESTful and GraphQL APIs to enable dynamic, real-time user experiences in complex applications.

RECENT **PROJECTS**

⬚ Medical Healthcare *(Angular & .Net)*

Live Link

Status :   **Ongoing**

Project Role :   Front end Design & Developer

Front end Tech :   `Angular`   `Tailwind`   `MUI`   `Fullcalendar`   `ekPay`   `sslcommerz`   `Agora`   `Socket.io`   `openAI`

Key Features :
- Doctor, Patient and multiple types Agent Dashboard.
- Home, Hospital and video call Consultation
- Appointment Management & Scheduling
- Doctor, Patient and Agent Profile
- Admin and Stuff Dashboard
- Appointment Rescheduling

- Role Based Access Control
- Automated Reminders
- Prescription Management
- Payment Gateway : SSLCOMMERZ
- Dynamic Filter and Search
- Telemedicine
- AI Generated Prescription

Challenges :
- The UI design and development process posed certain challenges due to the need for doctors to efficiently schedule, set, and customize their various appointment types.
- Rescheduling process from doctor side.
- Appointment Management.
- Create a E-Prescription.
- The entire process presented challenges, particularly in ensuring a seamless user experience that enables any user to easily booking appointments with their doctor.

⬚ IHYA : Donation Application *(React -Django)*

Live Link

Status   :   Completed

Project Role   :   Front end Design & Developer

Front end Tech :   `HTML`   `Tailwind`   `React`   `React hook form`   `Context api`

Key Features :

Authentication : Implement user registration and login functionality using Django's authentication system.

Category : Create a system to allow users to donate to different categories, such as individual, group, and corporate
